The Sturdi Saws are the most durable and easily maintained push saws available.

The tough welded box design reduces vibration and provides a very stable sawing platform. This eliminates "frame twist" so common in saws of lighter construction. With the engine mounted forward on the frame, the weight is concentrated over the arbor shaft, which helps keep the blade in the cut.

The laminar flow water system optimizes water flow to the blade. This improved water system reduces spray while delivering more water. This promotes longer blade life and faster cutting performance.
